EVENT DETAILS

THE LARGEST GLOBAL GATHERING OF HEMP BUILDING EXPERTS.

Montreal is our venue for the 7th Symposium as it is the region of activity of IHBA member ARTCAN who will be hosting our event and visit.

As usual we will have presentations from all sectors and all aspects of the system and materials used with hemp building.

Refreshments and lunches will be provided as will an evening dinner for all delegates.

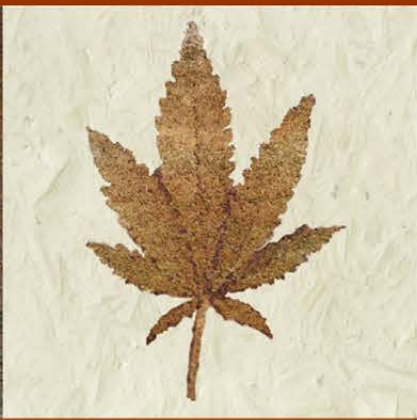

We have established a tradition at our symposiums to bring everyone out to see a project, which provides a unique opportunity to witness first-hand what we are talking about. This time we will be visiting an ARTCAN renovation project on a church and stonebuilding in St Jean sur Richelieu not far away from Montreal. Coaches will pick up delegates from the Hotel venue and return after the visit.

There will be plenty of opportunities for networking with others interested in this construction approach, exchanging experiences and knowledge and making contacts for the future.

PRESENTATIONS

The 7th International Hemp Building Symposium will feature fascinating presentations from those researching in the academic world and from the people designing and building with the materials or developing new products.

We always look to bring the very latest ideas and projects to our events so as to give delegates the best information to bring away with them. Some are made by students giving their first presentations of the thesis they have written others by those presenting their Doctoral research.

We will have explanations of new approaches and technologies which might have great importance for the future of the sector and we will also have tales of great courage and heroism of self builders or owners who took the decision to build with Hemp despite challenges the project might have had.

All presentations are made available after the event to delegates and IHBA members online as part of our member resources.

If you think you have a suitable presentation to offer contact;
